Q1.Read the text and answer the questions given below:

The Importance of Recycling

Recycling is when you take old things and transform them into new things. It sounds strange. But it's actually very scientific. Do you know how it all works? The first thing you have to do is to collect the items that can be recycled. Remember only certain materials can be recycled like; These include things made out of paper, metal, glass and plastic.

Can you think of everyday items made out of these materials? Soda cans are a good example. They are made out of metal. Magazines and newspapers are made out of paper. So are cereal boxes. Some bottles of juice are made out of glass. Bags and yogurt containers are made out of plastic. There are many things that can be recycled.

These things are usually stamped with the recycling loop. It has 3 arrows that go in a triangular circle. This shows that the cycle continues. Items are thrown away but continue their lives as something else.

Let's get back to the process of recycling. Once you put all your items in a recycling bin, a truck comes to pick them up. Everything goes to a recycling plant. There, the materials get separated. They go into different piles. There are special machines that crush each pile together. The materials get squashed into square cubes. They are really heavy. You would need a forklift to carry them. Companies buy these cubes and turn them into new products.

Now let's take a closer look at how old paper is transformed. First the paper is torn into tiny pieces. Then special water with chemicals is poured onto it. The fibers start to stick together. In time, a brand new roll of paper is created! If there were things written or printed on the first paper, they disappear. Recycling keeps our planet healthy. It reduces waste. It also saves energy. You can do your part. So just remember the golden rule: **always recycle your products!**
